

## RES-IO-COMMANDER READ ME FILE 4-6-2018

1) The address on the Rescomdr-XXXXXXX.exe files are very old: Please use the current contact information below and feel free to contact: the design engineer Ron Smith by phone or email at any time. Also, please let us know if you have any difficulties with any of our products or software. It should be noted that we will be working on products that will use the Arduino Nano 3.0 "processor module."

Thank you,

Ron Smith

513-638-0228 CELL (any time, if you get the message about the mail box not being set up, it only means that I am out of range, I am usually very easy to contact by cell phone)

2) The most recent version of the software is Rescomdr11142010.exe, this version will work with Windows10 and previous versions of Windows. This program does NOT require any installation; however, you will need to make sure that the .INI file is in the same folder, directory (or on the Desktop) to insure that your settings are preserved. See the USER GUIDE for additional information. The Rescomdr is color coded and Transmits serial data as indicated by the RED characters and any Received serial data is displayed in GREEN. Data rates from 300bps-115.2Kbps are supported for hardware UARTS, and from 300bps-921.6Kbps for USB serial links. There are 16 "banks/tabs" of 64 "hot keys" that can be used to save user strings of up to 1000 characters per string. There are several "Key-Files" that can be imported into a "bank/tab." These files contain typical commands for many of our products and make it easy to get started sending commands and receiving responses. There is a "drum sequencer" that is useful when execution multiple commands for exercising, testing or trouble shooting a "target" device connected to the serial port.

3) We have recently discovered that the older versions of the Rescomdr will NOT receive data when using Windows10 and possible earlier versions of Windows. It is best to use the Rescomdr11142010.exe version for best results. Please let us know if you encounter any anomalies when using the older versions of the software.

Thank you,

Ron Smith
